

CVSIG Meeting Minutes 7/15/2021 7am EST

Agenda	Discussion	Action Items
Welcome	<ul style="list-style-type: none"> • New member Emily Holcomb US Army ISMP Fellow • Merissa & Jill completed fellowship and will pass off work to new fellows • Goal for meeting is to use the information gathered in the blog and in presentations to produce a list of challenges and potential recommendations • Will vote as a group on which issues are still priority 	
Review Challenges	<p>General Comments May need to separate errors and risk factors Compliance with recommendations and public health policies would be a new category Reflect on errors we expected but did not experience and the errors which we didn't anticipate which did experience Some previous errors are no longer hazards now that we are more experienced</p> <p>Procurement</p> <p>Storage Failure to monitor storage temperature Segregate used and unused vials</p> <p>Preparation Restrict to one vaccine type at each site Leakage from vials during re-constitution, may be a vial design complaint Future usability studies on vials/how coring will affect it Labeling issues (or lack of labeling) in preparation Canada must assemble syringes and that is causing leakage Training supplies found in prep areas; need to segregate Established workflow is required</p> <p>Administration Correct patient identification Screening variation—patient gets 3rd dose Patient education—may be its own category</p>	ISMP Fellows to tabulate votes on priority

	<p>Adequate training of staff who administer vaccines Adequate administrative/IT infrastructure and support system Organized patient flow at administration site (waiting area, administration area, recovery area, etc.). Patients have been vaccinated again after waiting 30 min post vaccine; confusion with the flow of the vaccine location</p> <p>Monitoring/Follow Up May want to split into short term and long term goals Europe is not accepting SinoPharm or AZ (India) vaccines for entry In Saudi Arabia, we are now mixing and matching vaccines based on new evidence regarding using Pfizer vaccine after AZ Additional Monitoring & Follow up issue= Feedback to vaccinators and public (eg the system, the AEFI profile, the misinformation) Middle East delayed second doses until everyone got the first due to shortage Have had more young people fainting and it is challenging to appropriately monitor with face masks on the person</p> <p>MISC Misalignment or adjusting to regulatory or clinical changes/recommendations</p>	
Thank you ISMP Spain	Thank you to ISMP Spain for sharing an excellent COVID-19 resource. If any countries have recommendation documents share with group.	Countries to send any documents from their country on recommendations
Closing Remarks	<p>Thank you for continued participation ISMP will count the votes and draft a document for CVSIG members to comment on for the next meeting Correspondence over the blog may be a useful tool</p>	<p>ISMP will create a draft challenges and recommendation document based off the voting</p> <p>Monitor the blog for further details</p>
Respectfully submitted, Merissa Andersen, PharmD, MPH, ISMP International Medication Safety Management Fellow
